Hyperlauncher Tokenomics and Distribution Schedule

Max Supply: 50,626,000 $LAUNCH

All tokens are fully distributed and circulating upon token genesis on Hyperliquid exchange. [Trade Link](#) | [Hyperliquid Explorer Link](#)

Token Distribution Schedule:

- **LAUNCH Treasury:** 37.8% (19,144,628 tokens)
  - Fully unlocked and distributed at the Token Genesis Event.

- **Early Contributors:** 41.2% (20,847,752 tokens)
  - Fully unlocked and distributed at the Token Genesis Event.

- **Hyperliquidity:** 21% (10,633,620 tokens)
  - Locked forever at the Token Genesis Event, with a burn mechanism reducing supply over time.

Total Supply: 50,626,000 $LAUNCH (Subject to decrease through the hyperliquidity burn mechanism) https://api.hyperlauncher.ai/api/v1/launch/circulating-supply

---

Tokenomics and uses cases:

1. **Funding Agents:** In the Hyperlauncher ecosystem, $LAUNCH functions as a primary currency for funding AI-driven agents through the agent launchpad.

2. **Liquidity Token:** To facilitate smooth trading and enhance the liquidity of both agent tokens and $LAUNCH, agents launched on Hyperlauncher have the option to establish liquidity pools paired with $LAUNCH.

3. **Platform Fees:** A portion of the fees generated from using the agent launchpad is allocated to buying back and burning $LAUNCH tokens. This buy-and-burn strategy serves as a deflationary mechanism, effectively reducing the total supply of $LAUNCH tokens over time.

4. **$LAUNCH Index:** The $LAUNCH Index is a collective reserve funded by a portion of the token supply and revenues generated by all agents launched through the Hyperlauncher platform. Each agent commits a designated percentage of their token supply or generated revenues to the $LAUNCH Index, creating a pooled resource that is managed democratically by $LAUNCH token holders.
